

CEDARS-SINAI

6500 Wilshire Boulevard, 20th Floor, FPDC Relocation LOS ANGELES, CALIFORNIA

ZGF DESIGNED THE NEW 20,500 SF OFFICE FOR CEDARS-SINAI AT 6500 WILSHIRE BOULEVARD. THE 20TH FLOOR SPACE CO-LOCATES THREE SEPARATE, NON-CLINICAL BUSINESS UNITS THAT FORM A KEY PART THE ORGANIZATION'S LEADERSHIP TEAM.

Facilities Planning, Design and Construction oversees the growth of Cedars' physical environment, while Business Development engages in strategic assessment of real estate needs and acquisitions, and Managed Care oversees the compliance and care needs of end-user patients. A number of interactive visioning sessions and Cedars-Sinai's collaborative corporate culture informed the design, which features bright, glass-fronted private offices pulled off the building perimeter in favor of large spans of open work areas with expansive views. A central work café offers a variety of seating options for

breaks and informal meetings. Custom environmental graphics inspired by the city of Los Angeles were also designed and fabricated by ZGF. Visitors are greeted by a reception desk behind which is a floor-to-ceiling wall with a custom map made of felt and a combination of CNC cutting and printing. Across from the reception wall is a 14-foot-wide by nine-foot-high LED art installation in the reception area. In an artistic nod to the healthcare industry, the mesmerizing feature consists of 2,500 medical-grade centrifuge tubes that protrude from perforated wood panels and are back-lit by 3,500 color-changing LEDs. Programmed to an algorithm based on harmonic resonance, the ever-evolving artwork never displays the same color combination twice in 24 hours.
